BRANCH

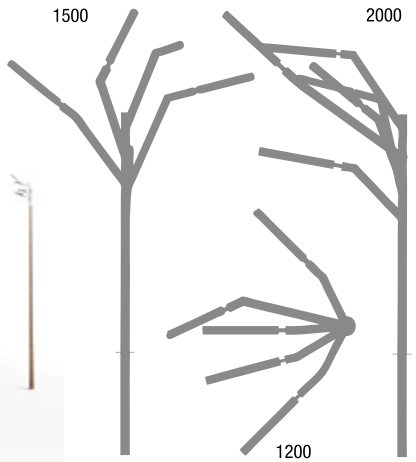

Branch on näide valguselemendi Wannabe kasutusvõimalustest tänavavalgustusel. Branch on kergliiklusteede ja hoovialade valgusti, mille kuju on inspireeritud männipuu võrast. Valgusti elemendid on liigendi abil vabalt suunatavad. See võimaldab üheaegselt valgustada nii teepinda, ümbritsevaid hooneid kui erinevaid objekte. Wannabe valguselementide arvu “võras” saab varieerida vastavalt disainile või valgustehnilistele eesmärkidele.

Branch valgustid sobivad kasutamiseks nii erilahendusega kui standardsetel tänavalgustuspostidel.

Branch is an example of a lighting element Wannabe used as street lighting. Branch is designed for use in light traffic areas and yards. The shape of it was inspired by the crown of a pine. The elements of the lighting fitting can be freely directed with a joint. This enables to light the road, the surrounding buildings as well as different objects at the same time. The number of elements in the crown of Wannabe can be varied according to the design or goals for lighting solution. Branch luminaires are suitable for special design as well as standard design street light poles.
